TREATMENT OF TURF BURNS

1) Clean the wound with **Hydrogen Peroxide**; Use the gauze to wipe, or dab the wound clean with generous application of hydrogen peroxide.

2) Spray **Bactine** on the wound, which would provide additional cleansing, plus pain relief.

3) If wound is weeping, cover it to protect it from further infection from the turf. Use gauze with pro-wrap if Band-Aid won’t stick.

4) Once home, wash the wound again with soap and water.
